

ATLYST Visualise, Analyse and Share Traffic Data

TRAFFIC ANALYTICS

INDIVIDUAL VEHICLE DATA

ATLYST uses the familiar and trusted MTE algorithms to generate statistics using each vehicle.

INTERACTIVE MAP VIEW

ATLYST uses editable colour schemes and three data layers (Volume, Speed and Class) to quickly and clearly display network-wide traffic behaviour, track changes and identify unusual patterns.

AUTOMATED REPORT CREATION

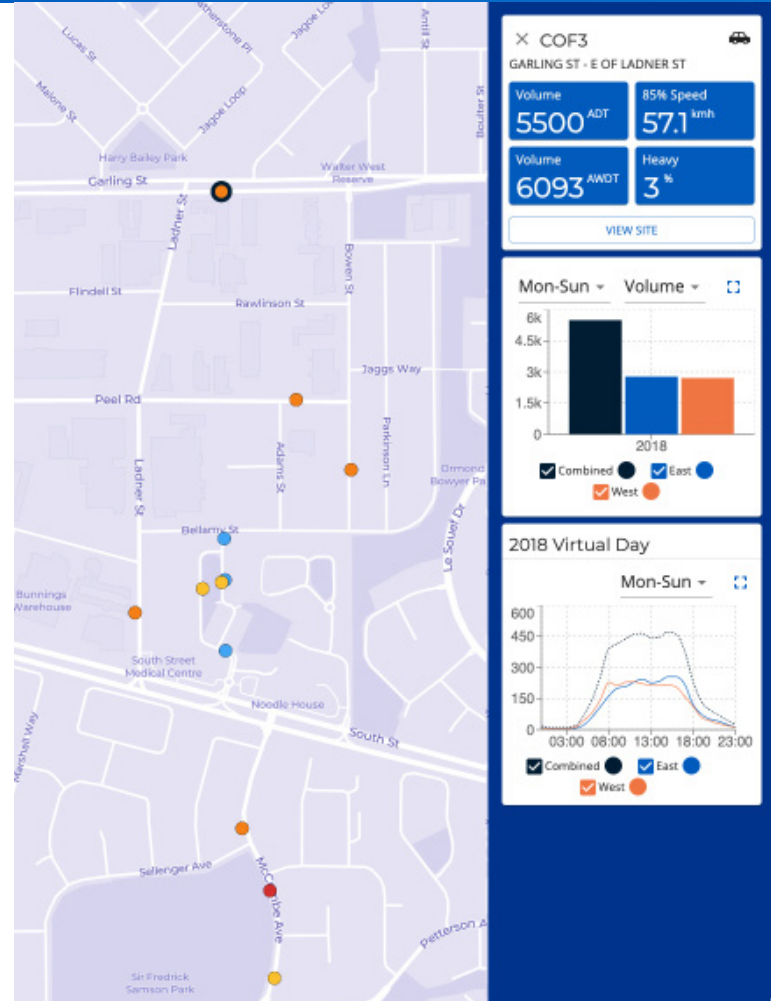

Get access to a detailed view of each survey site with one click, including the 85th percentile speed, ADT, peak hours, virtual days, etc. Apply filters to quickly reach specific information.

SMART MULTI-SITE COMPARISON

Store and access traffic data at the same location to quickly see changes over years. Select neighbouring locations for multi-site comparison.

VARIOUS DATA FORMATS

ATLYST securely archives your raw data files and exports statistics in PDF, CSV and XLSX formats.

DATA & SURVEY MANAGEMENT

AUTOMATED DATA VALIDATION

Drag and drop your files into ATLYST to start an automated data quality control process. You will be notified if any anomalies are found.

SMART SITE EDITING

ATLYST uses built-in tools to enable easy changes to site details or merging of multiple datasets at neighbouring locations into the same site.

CONSISTENT SURVEYS

Easily create and send MTE Site Lists to your field team and contractors, ensuring replicated surveys use the same site details. Save time and keep your data organised.

SECURE DATAFILE ARCHIVE

Build your archive of raw data files in the Cloud for quick access and download from any computer, at any time, while retaining full data ownership.

QUICK GIS PLATFORM EXPORTS

Bulk export your data into CSV files for easy transfer to other GIS and Asset Management applications.
